2018 | FULL YEAR

*Lundhags*

WE HAVE SEEN THE SEASONS CHANGE SINCE 1932.  
WE KNOW THE NORDIC CLIMATE PUTS HIGH DEMAND  
ON OUR PRODUCTS. FROM THIS WE HAVE LEARNT WHAT  
WORKS AND WHAT DOESN'T. LOVE THE SEASONS.

*Lundhags*

## THE SEASON IS NOW

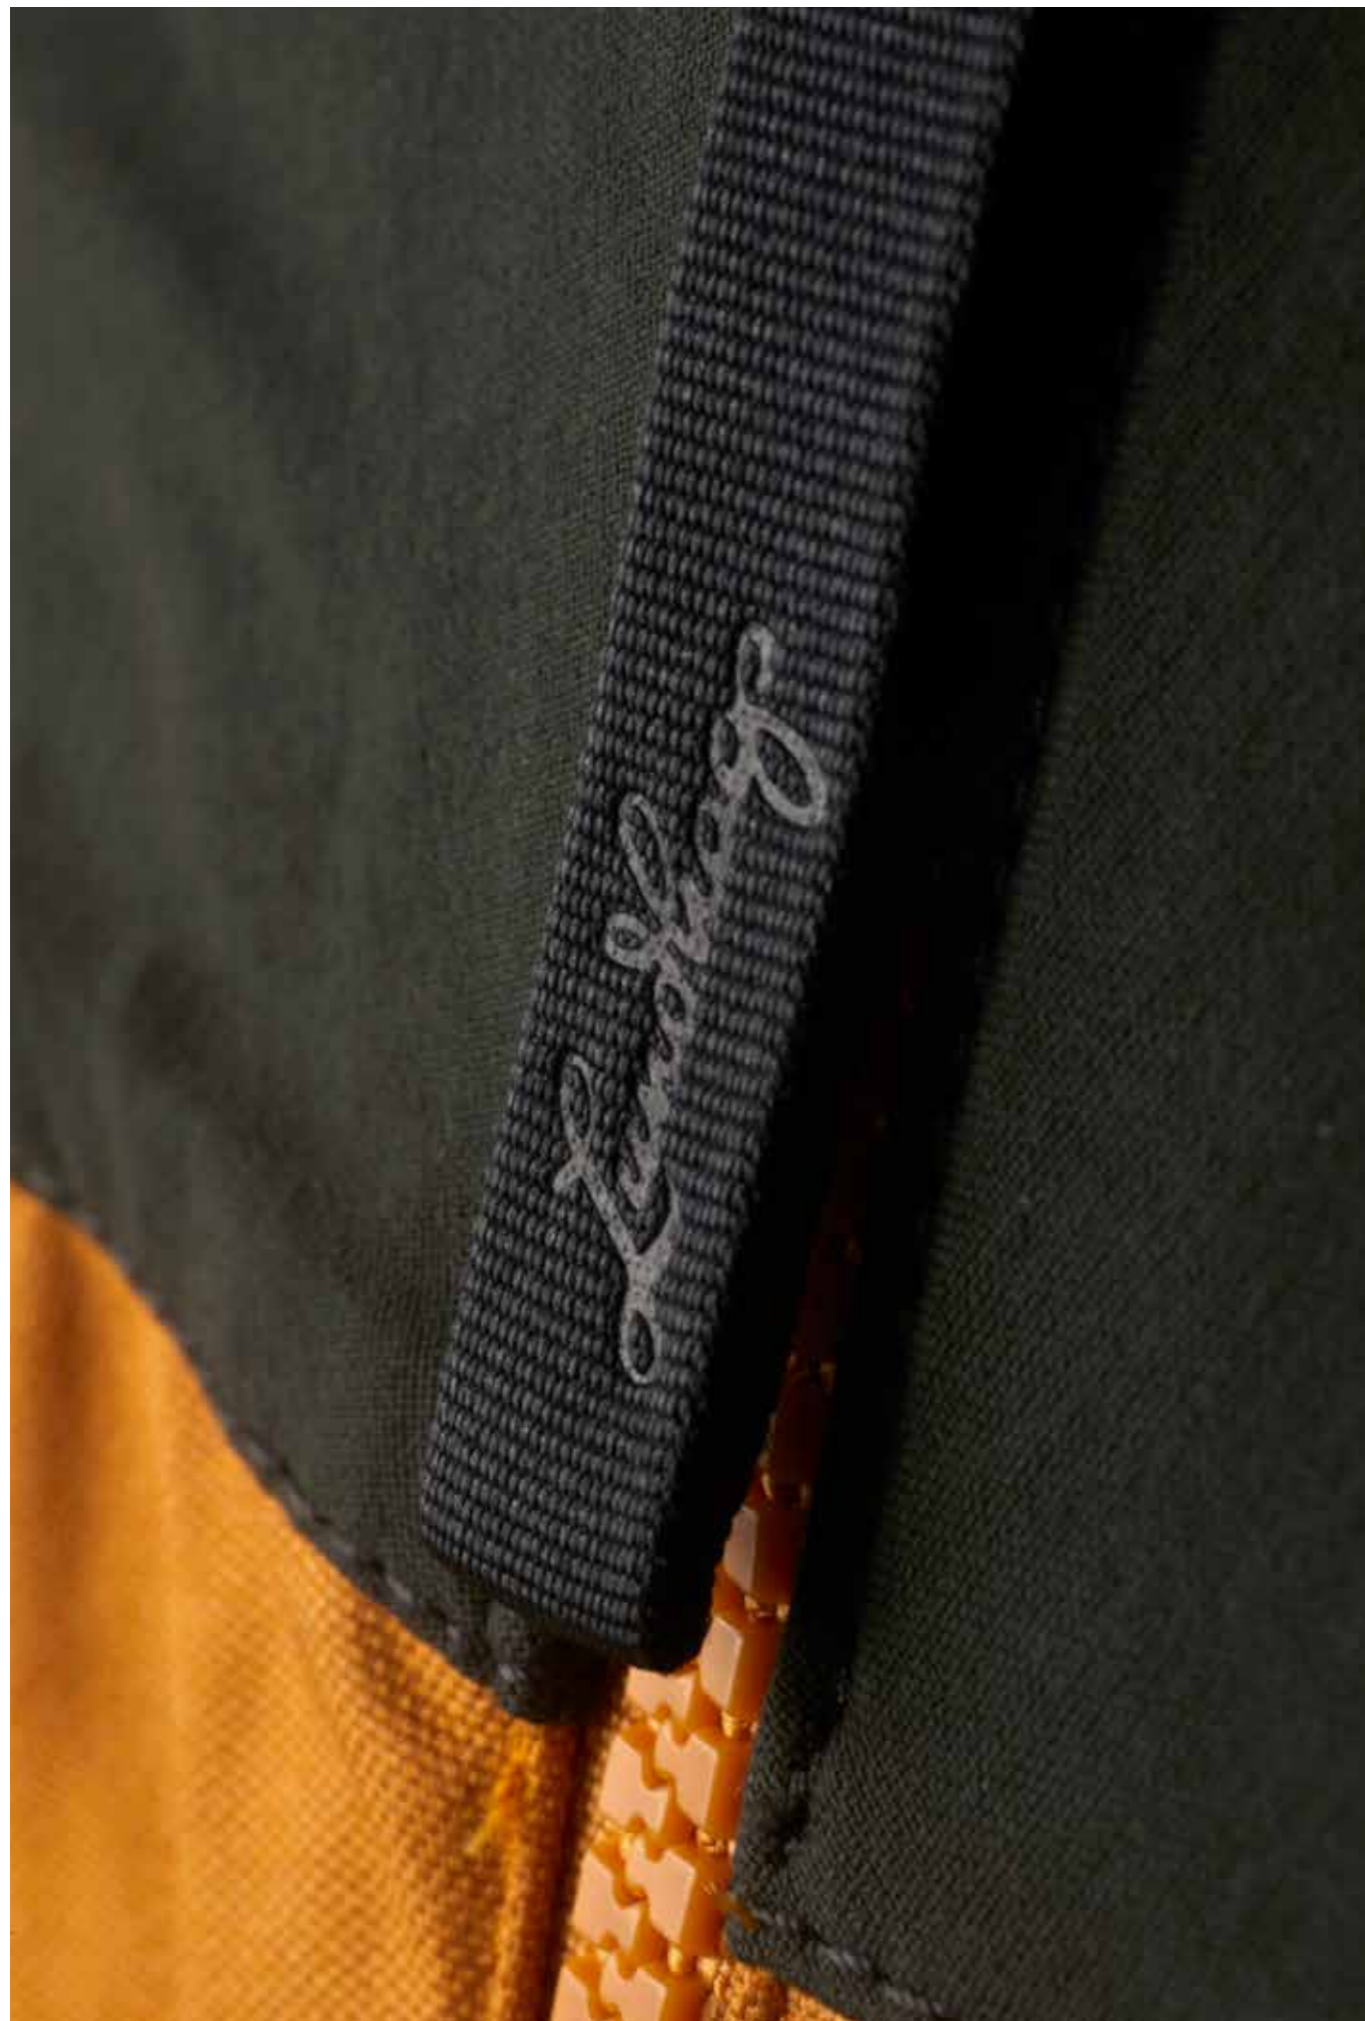

2018 is a year without compromise. Never before have we had so much to present, not only new products, but also in the form of new ways of working, sustainability and material choices. This year, we take a much longed-for step towards a year-round assortment. Not two, four or six seasons – but one season. Our one assortment comprises outdoor products for all year around. We remove repetitive stages in the working process, to focus our time on the core of our business. To develop world-class outdoor products.

With a completely new backpack program, we take our hardware segment to a new level, with exclusive material choices, a focus on repairability, and with function and design that breathes Lundhags in every detail. We update the majority of our LPC (Lundhags PolyCotton) fabrics with newly developed LPC fabrics in organic cotton and recycled polyester. This means that the main parts of our pant, jacket and backpack ranges will now be even more sustainable. A milestone for Lundhags. The introduction of Omni, a footwear collection of hiking shoes and boots designed to be used in the borderland between the urban environment and the mountains, completes our 2018 assortment.

With our new one-year development process, and a conviction to make products that last long, which can be used for many different activities and can also be repaired, we want to lead the way to a sustainable lifestyle and a more enjoyable outdoor life. Regardless of season.

Love the seasons. The season is now.

Henrik Ottosson, CEO at Lundhags

# A ONE-YEAR RANGE

---

In this workbook we present the 2018 full year range from Lundhags, not only spring/summer but also fall/winter. The overarching goal is to develop better products, to present them in a clear way and to become an even more sustainable company.

## **One year, one range**

By presenting the full year range at the same time, we want to give you the chance to plan your retail year in a better way with several drops and a clear colour scheme for both spring/summer and fall/winter, as you can see on page 50. This will make your store visually attractive and well presented, regardless of season.

## **Planning your assortment**

It will be clear what styles and colours are carry overs from one season to the next and also what styles and colours work together across seasons.

As a dealer, having a fall assortment that builds on the spring styles increases the chances of repeat business. Now you will be

able to see the whole picture. When we can show you how our styles and colours mix and match over time, you can plan your purchasing better. And as you know, most of our styles are carry over.

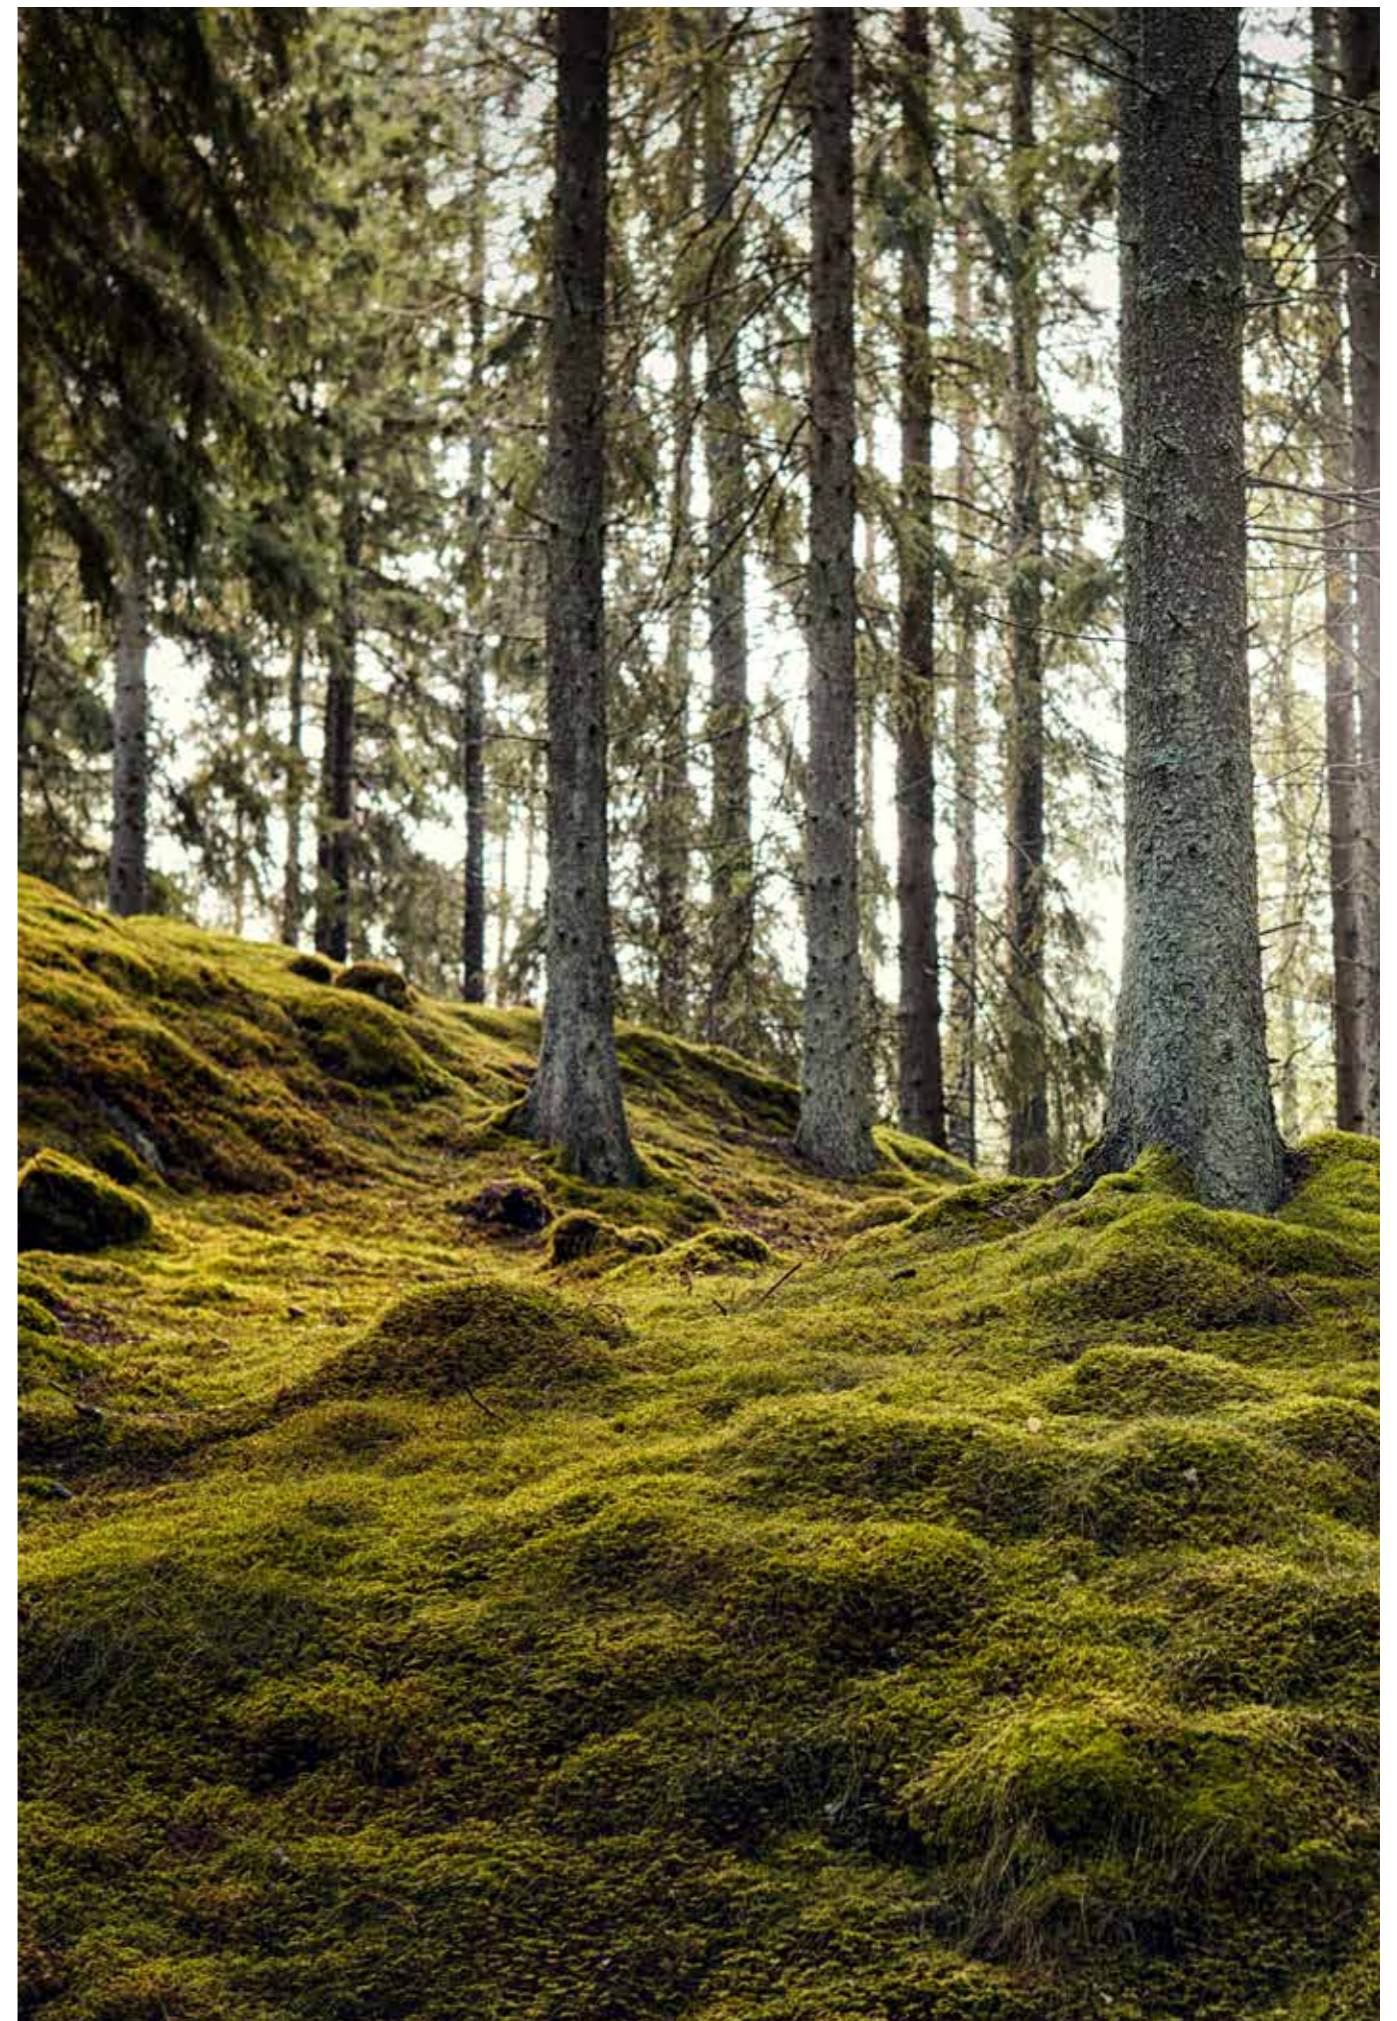

That in itself is a major sustainability factor through out the whole value chain, and in the end it reduces the risk of end-of-season sales. The result being increased profitability.

## **Early orders - increased profitability**

By also placing your fall/winter preorders before the spring/summer deadline, we guarantee the price, which further reduce risk and increase profitability.

## **Time well spent**

With this new approach we hope to make your purchasing process easier and more efficient. This means that you can focus more of your time on clinics and other sales driving efforts, making sure that the products you buy also sell out of the store and that margins remain.

---

# SUSTAINABILITY

---

## PRODUCTS THAT LAST OVER TIME

Sustainability has been a natural part of the Lundhags DNA since our beginning 85 years ago. Lundhags develops and sells functional products with a long life, a high level of reparability, and with materials of the highest quality. We strive to minimise the negative effects of our business. The overall, most important issue is to manufacture products that our users can and want to have for a long time.

## MATERIAL

The choice of material in our products is important from several aspects. The material must partly fulfil its function for the product to have a reason for being, but the material should also have the least environmental impact – presently, these two parameters are almost always opposed to each other. The aim is for all of our materials to not have any negative environmental effects. It will take a long time and much hard work and focus to get there. We cannot reach this goal without our suppliers. Many of our materials are certified, but we have proportionately few suppliers, which we have collaborated with for a long time. Good relationships with our subcontractors are a must for us to succeed in issues of sustaina-

bility.

## ASSORTMENT

Lundhags assortment should have a clear focus, each product should fulfil its purpose and preferably have a broad area of usage. We work with a high level of carry over products, creating an assurance throughout all segments. Our production is proportionately evenly distributed throughout the year, creating a more even balance on our suppliers and more regular transports.

## DEVELOPMENT PROCESS

Now we introduce the entire collection for 2018 at the same time, instead of on two separate occasions. We give ourselves more time to develop the products and test them in an entirely different way than what we usually do. We can release products that are completely developed and ready for introduction. The goal is for each new product to be a future classic. By presenting the entire collection on one and the same occasion, instead of working with two or four seasons, we reduce the number of meetings, the number of trips and the number of sales samples.

# THE SHELL PRINCIPLE

## ANATOMY OF THE LUNDHAGS SHELL BOOT

The image above is a cut through of a 3-layer boot. The main difference between the 3-layer and 1-layer system is the number of layers in the shaft. One layer of leather in the 1-layer boots and one layer of leather in the 3-layer boots supplemented by a layer of Ariaprene adding insulation and support and another layer of leather on the inside of the shaft. The other main difference is the main material used in the bottom. On our 1-layer boots we use the classic Certech cellular rubber which comes in different thickness depending on the level of insulation needed. On the 3-layer boots we use Certech EXP which is just 1,5 mm in thickness. This is then lined with Ariaprene and microfibre for insulation and comfort.

# THE SHELL PRINCIPLE

In the outdoors, numerous principles will determine whether or not you have a good day. When talking about clothing, we refer to the layering principle, where you layer upon layer various garments to adapt your clothing needs according to such factors as the weather and your body's physiology (how warm or cold you get outdoors).

At Lundhags, we recommend something that is similar to the layering principle, called the shell principle. Here, you combine a base layer that transports moisture and warms, a midlayer that insulates and an outer shell layer that protects against the elements such as weather and sharp objects. This principle has guided us at Lundhags for decades. And in many instances will serve you well, regardless of terrain or weather.

A rugged outer shell will protect your feet from weather like cold, rain and snow, and trail obstacles like rocks, shrubs and branches. A rugged outer layer should not have a solid absorbent liner, because this will capture moisture and make it nearly impossible to dry or wash. With synthetic linings, after a day on the trail let alone several days of hiking, the lining itself can develop an unpleasant odour of smelly feet.

A good inner climate for your feet and protection from blisters is essential. Here, two pairs of merino wool socks create friction zones between the socks, instead of against your skin. Two pairs of socks also provide you with a comfortable climate inside the boots. Wool is very effective in making

you feel comfortable by getting rid of that moist, clammy feeling inside the boot. Merino wool is a wonderful next-to-skin material and is unique in its ability to resist odours, even after several days of usage. And it doesn't itch. Add a pair of felt insoles to your boots and you will essentially leave little to chance.

A shell boot works for any season. You regulate the foot's climate, depending on your choice of socks and insoles. After a day on the trail, remove the insoles and socks, or inner boots if you are wearing a pair of Lundhags winter boots, and dry the various layers and shell. This way, you can start the next day with dry feet and dry boots. This is not only a prerequisite to survive a mountain trek, but also to enjoy the experience and get the most out of your hike.

Shell boots are your "go-to" boots in any environment, any weather, any situation. They are comfortable, rugged, long lasting, and highly repairable. The construction of our shell boots means a very short break-in period and the boots can be repaired again and again, no matter what needs to be replaced. The combination of an outsole that provides good traction, an insole that provides comfort and warmth, a lower part that protects against the elements, and a shaft that gives stability and waterproofness mean that you have a boot for life and all its adventures.

# 3-LAYER BOOTS

## LUNDHAGS 3-LAYER SHELL BOOTS

The 3-layer boot is the perfect choice for users that carries heavier loads, like to hike off trail or just want that extra bit of protection, insulation and support. All 3-layer boots feature the new Certech EXP bottom which provide stability and keeping your feet dry while remaining flexible and without adding weight to the boot.

Jaure II High is an updated version of Lundhags most technical boot. Jaure is our most advanced boot with a durable and light lower part in Certech Exp technology – a shell construction with an outer layer in Liba Smart, midlayer in EVA and microfibre closest to the foot. Jaure II has better durability in the toe section and a new heel wedge for better shock absorption. The shaft is manufactured in Heinen Terracare Nubuck and new Ariaprene, which gives good insulation, high comfort and a fit that improves over time.

- Shaft in Heinen Terracare nubuck leather, 2 mm Ariaprene Cor and 4 mm Ariaprene Max
- Lower parts in Certech Exp (1.5 mm Liba Smart, 2 mm EVA, 1 mm Micro fibre)
- Extra heel grip with Heel Fit Control (HFC)
- Vibram Traction sole with rugged traction
- Beta Pro insole
- Heel wedge in shock absorbing polyurethane
- TPU toe protection

<b>NEW</b> 716 Pecan											
910 Black Nubuck											

A mid-high version of Vandra High. A 1-layer, classic shell boot made from full-grain or nubuck leather. A stable boot with a modern design and a padded top collar. The Vandra is developed according to the shell principle. It offers a protective shell layer that is easily adaptable to both the activity and temperature. A 1-layer boot is lighter, more flexible, breathes better and can be more easily repaired compared to a lined boot.

- Shaft made from full-grain (716) or nubuck leather (910)
- Single size shaft for the best fit
- Cellular rubber base with Certech 3.0-construction
- Vibram Traction sole with a powerful grip
- 6 mm EVA for insulation and cushioning
- Opti-last, a slightly wider last with a lower instep and generous toe box
- Sturdy pull loops on the sides of the shaft
- Padded collar

Produced in Sweden, the Forest II is a minimalist and classic 1-layer boot made from Full Grain Leather. Forest II is an affordable workhorse and has been upgraded with extra heel grip by the addition of Heel Fit Control (HFC) together with the new Defender outsole with integrated toe protection.

- 1-layer boot with a high shaft
- Extra heel grip with Heel Fit Control (HFC)
- Shaft made from Full Grain Leather
- Regular last
- Cellular Rubber base with Certech
- 2.5-construction that is slightly softer
- Rubbermac Defender outsole with integrated toe protection
- Insulating EVA for shock absorption
- Rear back-loop
- Shaft height 27 cm
- Lace length 150 cm

# FELT LINED BOOTS

## LUNDHAGS FELT LINED BOOTS

Our felt lined boots are 1-layer boots fitted with a warm and comfortable removable wool liner. The lower part of the boot is made from a thicker Certech material to provide extra protection from the cold. The Vibram outsole and insulated midsole provides grip and insulation from the cold and the gusseted tongue prevents snow from entering the boot.

Polar Quest is our warmest winter boot. Polar Quest has a high shaft, a removable wool felt liner, a durable cellular rubber base and a Vibram Traction-sole. The tongue design makes for easier repairs. The last has also been redesigned to fit into the regular last category, providing better support even though the volume has been increased to make room for extra socks. A durable cellular rubber base with Certech 5.0 construction provides good stability and insulation against the cold, and the softer Vibram Traction sole is perfect for icy conditions.

- High shaft made from Perwanger Split Leather
- Regular Winter-last
- Cellular rubber base with Certech 5.0 construction
- Vibram Thor outsole in Megagrip compound
- Removable 5 mm wool felt inner boot
- Integrated heel grip through Heel Fit Control, reinforced with Cambrelle

Skare is our lightweight and durable winter boot. It is perfect for winter hiking and snowshoeing. The wool felt inner boot is removable and guarantees warm, dry feet, and it can be worn indoors. Skare has a Vibram Curcuma outsole with toe protection. The boots are made according to the shell principle, and the sturdy outer shell combines rubber in the lower part of the boot and high quality split skin leather.

Skare has a long lasting construction that is highly repairable and serviceable.

- Lightweight winter boot
- Shaft made from Perwanger Split Leather
- EVA insulation in midsole
- Vibram Curcuma outsole with toe cap
- Removable 3 mm wool inner boot with HFC heel grip

# BC BOOTS

## LUNDHAGS TOUR AND SKATING BOOTS

The 1-layer boot is the classic Lundhags Shellboot. With a single layer of leather in the shaft the boot adapts to the shape of your lower leg, almost making it an extension of your body. The lower part is made of Certech cellular rubber and keeps your feet dry while providing good stability when carrying heavier loads.

# A NEW RANGE

## OMNI IS OUR RANGE FOR GENERAL OUTDOOR

Our Omni boots are developed in the borderland between the urban environment and the mountains. For those who just love being outdoor but still value function and comfort. A new collection of all-round hiking shoes and boots for light hikes and everyday use. With a focus on instant comfort, functional quality and products for all seasons. Our Omni collection does not compromise on quality and Nordic authenticity. Great value products for all year use. With our three segments. Shell boots, Omni and Heritage, our goal is to offer our customers a complete selection of footwear for all their Outdoor needs. From the mountains to the city, and everything in between. All our footwear is made in Europe to the highest manufacturing standards using only the best components and materials. With world class craftsmanship as the main ingredient.

# OMNI

## LUNDHAGS OMNI

Omni is a new and highly versatile range of shoes that bridges the gap between our shell boots and the Heritage collection. Perfect for your daily hikes, whether in the outdoors or in more urban environments. The models in the Omni range are stable while being flexible. They are breathable while offering enough weather protection thus providing a good foot climate.

Bjerg Ws Low is a durable hiking boot, with an adapted women's last. Made with a Heinen Terracare split skin leather upper and an exo-skeleton in Libasmart and TPU film.

For increased comfort, the upper around the ankle is padded and we have created a new new three layer insole. A layer of Libasmart expanded TPU protects the toe and heel, a thin layer of TPU film reminiscent of our classic shell boots provides an extra layer of side protection against water and abrasion. The women's model is customized with a more flexible lasting board as well as a softer EVA midsole.

- Heinen Terracare split skin Comfortable ankle cushioned upper construction
- Comfortable ankle cushioned upper construction
- TPU Film exo skeleton
- Vibram Trek buff outsole
- Libasmart heel and toe protection
- Expanded PU + wool felt inlay sole
- New 3-layer insole (synthetic felt, Arneflex midlayer, mesh top cover)

A nice summer shoe for everyday wear. Strei Low is comfortable and breathable and also suitable for light hiking.

The upper is made from Italian Corradi split skin leather and a layer of Libasmart protect your toes. The sole unit combines a cushioning EVA midsole and a versatile Vibram outsole for excellent traction if you venture off the beaten path.

- Italian Corradi Leather
- Vibram Trek buff outsole
- Libasmart toe protection
- Breathable upper construction
- Flexible lasting board
- Compressed PU comfort sole with self cleaning wool top layer
- New 3-layer insole (synthetic felt, Arneflex midlayer, mesh top cover)

#### LUNDHAGS HERITAGE

The Heritage collection pays homage to previous models from our long tradition of boot making. Traditional workboots with timeless design. Made with modern materials and great attention to detail.

# HERITAGE

Lundhags clothing has been fluorocarbon-free since 2015, there are still other chemicals that need to be removed and replaced. We have to make important choices in each step of our development process.

For our kind of business, the value chain is very complex. Our fluorocarbon-free clothing has a long journey before entering a shop, whether coming from Vietnam or Europe. Our LPC (Lundhags PolyCotton) garments are sewn in Vietnam, and transports from the factory to the warehouse are long. All our wool garments, which use mulesing-free wool, and shell garments, which are fluorocarbon-free, are sewn in Europe for shorter transports.

Here, the choice of materials is critical. A material must fulfil a certain function to have a *raison d'être*. The material should also have the least environmental impact – presently, these two parameters are almost always opposed to each other. The aim is for all of our materials to not have any negative environmental effects.

A major step in our efforts is to replace the majority of our LPC fabrics with new developed fabrics in organic cotton and recycled polyester. By doing so, we commit to increase our recycled fibre content and to reduce the use of harmful chemicals in our clothing and backpacks. Many of our materials are certified, but good relationships with suppliers and subcontractors are as important for us to succeed in issues of sustainability.

For 2018, we are introducing a collection of clothing that can be used year-round. Not two or four or six seasons – but one season. This collection will be our most extensive in a long time. In doing so, we introduce new ways of working with sustainability and choices of materials. All of which leads us back to our efforts to increase the use of recycled fibre content and to further reduce the amount of harmful chemicals used in the value chain. No matter what the season, our customers will be rewarded.

## LOGGER SUEDE MS BOOT

**Article number:** 1010215

**Sizes/weight:** 40-48

**Last:** Wide

**Shaft height:** 19 cm

**Lace length:** 160 cm

**Material:** Heinen Terracare Suede, Lundhags Commando sole

900 Black																			

Logger was inspired by traditional work boots from the forest industry. It has an elongated lacing system for a flexible fit and a padded collar for comfort. The gusseted 2-layer tongue keeps out water and snow. New Narrow+ last with a slightly wider toe box on the outside.

- Workboot with a mid high shaft
- Lundhags Commando soles, rough textured and durable with 60 ShA
- EVA insulation (3 mm) for cushioning and insulation
- Shaft made from Heinen Terracare Brenta split
- Insole made from full grain Leather
- Upholstered upper section
- Waxed flat laces/round work boot laces, 160 cm

## COBBLER BOOT WOOL

719 Burgundy																			
910 Black Nubuck																			

The winter version of the Cobbler boot, our very own version of the Chelsea boot. Instead of lacing, the shaft has been fitted with elastic, which provides easy entry.

Cobbler is made from Bergamo leather and Terracare Regatta wax, a waxed nubuck from Heinen that gives a mat, sober impression. A genuine sheep fur lining keep your feet warm during colder days.

What makes Chelsea unique is the seam across the middle and the elastic above the ankle. These boots were very popular during the 1960s, when The Beatles music band introduced them.

- 2-layer boot with a mid-high shaft
- Genuine sheep fur lining
- Shaft made from Heinen Terracare Bergamo leather and Heinen Terracare Regatta Wax
- EVA (3 mm) for cushioning and insulation
- Full-grain leather insole
- Elastic above the ankle
- Lundhags Commando soles, rough textured and durable with 60 ShA

Tanner is a classic 1-layer work boot that feels like true Lundhags in its design. The design and details, like the stitching and tongue, have the same character as the legendary Park boot.

Tanner is made from Bergamo leather with a darker and oilier surface. The boot is also available in a lower model called Tanner Chukka. Chukka boots were very popular work boots in the 1940s and 50s.

- 1-layer boot with a mid high shaft
- Shaft made from Heinen Terracare Bergamo
- EVA (3mm) for cushioning and insulation
- Full-grain leather insole
- Lundhags Commando soles, rough textured and durable with 60 ShA
- Waxed flat laces, 140 cm

# MATERIAL UPDATES

Lundhags clothing has been fluorocarbon-free since 2015, there are still other chemicals that need to be removed and replaced. We have to make important choices in each step of our development process.

For our kind of business, the value chain is very complex. Our fluorocarbon-free clothing has a long journey before entering a shop, whether coming from Vietnam or Europe. Our LPC (Lundhags PolyCotton) garments are sewn in Vietnam, and transports from the factory to the warehouse are long. All our wool garments, which use mulesing-free wool, and shell garments, which are fluorocarbon-free, are sewn in Europe for shorter transports.

Here, the choice of materials is critical. A material must fulfil a certain function to have a reason for being. The material should also have the least environmental impact – presently, these two parameters are almost always opposed to each other.

Organic cotton

Mulesing Free Merino

Fluorocarbon Free

Recycled Material

The aim is for all of our materials to not have any negative environmental effects. A major step in our efforts is to replace the majority of our LPC fabrics with new developed fabrics in organic cotton and recycled polyester. By doing so, we commit to increase our recycled fibre content and to reduce the use of harmful chemicals in our clothing and backpacks. Many of our materials are certified, but good relationships with our suppliers are as important for us to succeed in issues of sustainability.

For 2018, we are introducing the full year collection in one go. This collection will be our most extensive in a long time. In doing so, we introduce new ways of working with sustainability and choices of materials. All of which leads us back to our efforts to increase the use of recycled fibre content and to further reduce the amount of harmful chemicals used in the value chain. No matter what the season, our customers will be rewarded.

**MAKKE MS PANT**  
 Makke is one of our most popular pants. It has a contemporary silhouette and is packed with features. Based on a light LPC quality with large Schoeller Dryskin panels it has a fit that accommodates a wide range of body types. With no less than six areas of ventilation it functions well even in warmer climates. For 2018 the Makke (as well as our other LPC garments) is updated with a more sustainable LPC quality with recycled polyester and organic cotton.

## MAKKE MS PANT

The Makke Pant is designed for the more demanding days in the outdoor. A lightweight full function trekking pant with a slim fit and modern cut, engineered for an active user. The Schoeller Dryskin fabric stands up to abuse from branches and rubbing against granite. The DrySkin softshell panels also enhance flexibility where you need it most and Schoeller Keptotec reinforced hems will keep your insteps intact. When you need some cooling, open the inseam ventilation zippers, the hand pockets and lower leg zippers.

- LPC mechanical stretch body material
- Schoeller Dry Skin stretch at seat, knees and crotch
- Keptotec reinforcement at insteps for extra protection
- Waist adjustment with Velcro
- 2 zippered hand pockets
- 2 zippered thigh pockets with bellow construction
- Inner thigh ventilation zips
- Hand pocket ventilation
- Lower leg zippered opening for ventilation
- Adjustment at hem
- Removable boot hook

**Sizes/weight:** 46L-56L/455 g

### New fit for the 2018 pant collection

**Linda Norlund, head of patterns Lundhags:**

"For outdoor products, fit is complex and critical"

Prior to 2018, Lundhags is conducting an extensive development

project on the theme of fit, where all garments are reviewed and adjusted so that the customer can trust that the same size applies regardless of model. This will become even more important with the growth of e-commerce. Head of patterns, Linda Norlund, tells more about the project.

How important is fit for a company like Lundhags?

- Pattern design is always important, nobody wants a garments that wears badly. But in this industry, the products are very complicated, pattern-wise, because there are so many types of fabric qualities,

cuts, fabric blends. We can have a "little stretch back and front, but rigid in between". Therefore, the need for pattern design is even more critical.

Describe the development process of a new product, from your point of view?

- When we have identified the need for a new product, our designer Ana begins her idea process and works out her ideas on sketches.

We agree about the important focuses for the garment. Then,

I come with measurement lists from the sketches, where I begin from body measurement lists that I have compiled for Lundhags. Here, I need to consider the product requirements, such as that you would like space for an insulation jacket underneath the shell jacket, for example. When we receive our first product sample, we check the dimensions and adjust the measurements that for some reason are faulty.

How have you worked with the fit of existing garments before 2018?

- We have reviewed all styles, to ensure that the

customer can trust that he or she has the same size regardless of the garment. So, all garments that we call carry-overs are actually new garments in that their sizes have been adjusted. We secretly began the project before FW17, but we can say with all certainty that before next year, if you have a size 42 in Antjah, you will have 42 is all pant models.

## LOCKNE WS PANT

Article number: 1124071

Sizes/weight: 34-46/470 g

Material: LPC 205 RM/OC, 65% Recycled Polyester, 35% Organic Cotton. LN-stretch 255 RM, 90% Recycled Polyamide, 10% Polyamid. Product, including DWR 100% FC Free.

### The design process for the 2018 collection

Ana Kristianson, designer Lundhags:

“My focus is always sustainability and functionality”

This year, Lundhags is presenting its most complete clothing range ever. An entirely new insulation garment, a PRO version of our popular Makke Pant (now also as a jacket) and a heap of new pant models are among the new products. Lundhags clothing designer Ana Kristianson tells more about the 2018 design work.

Describe the design process of Clothing 2018?

- We have developed a range that covers all needs, year-round. Base layers, midlayers, extra layers and shells. We have garments for the hardcore trekker, as well as the more urban customer. An important aim has been to make garments that match our new Omni shoe collection, products for the customer who moves between city and nature.

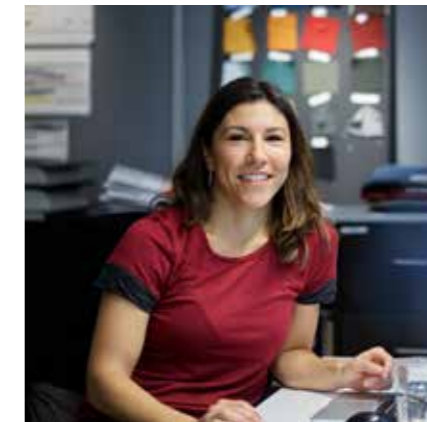

How does the creative process look when working with a new product?

- We always begin by identifying the need. Why should this product exist? Who will use it, and for what purpose? How do we incorporate Lundhags values into the product? Then, we add function, lines, colour. And I always make quick hand sketches before I move on to the computer. A front and backside in the initial stage. This is the how I am most creative.

How does Lundhags look for 2018?

- The focus is still on clean design, as per our classic fashions and styles, with rather sharp lines. We now have a slightly more monochrome look, where we work more tone-in-tone to avoid strong contrasts between our colours. Our most vital design focus

is sustainability and functionality. We have focused on scaling back features that do not fulfil a clear purpose. Our fantastic materials should do the work, and as soon as you place a seam, for example, you affect the characteristics of the material. I have also worked with lines, where I want the design language to be somewhat more angular rather than round and “swirly”. You should not be able to see if a product is two or ten years old, our design should be modern but classic. Timeless design is one of the keys to sustainable products. Other keys are garments that are hardwearing and easy to

repair.

How do Lundhags designers work along the borders between categories?

- Prior to 2018, we gained an overall impression of the Lundhags collection, where we could see, especially on the colour scales, a common theme between backpacks, boots and clothing. The goal is that our customer can see that the products come from the same company. An example is that our hardware designer, Håkan, has taken design features from the pockets of our popular Makke Pant into his work with our new backpacks.

A lightweight versatile outdoor pant perfect for hikes and travel. Reinforced back panels and stretch inserts give the wearer extra protection and freedom of movement. Big side zippered pockets keep your necessities safe and at hand. The monochrome colouring makes the wearer look appropriate in many different environments.

Regardless if you are hiking, travelling or doing a summit tour on skis, the Merino Raglan is suitable as a base layer year-round. It's clean design with flatlock seams means that you avoid unnecessary chafing on the shoulders when wearing a backpack. Merino wool is naturally anti-bacterial and regulates body temperature.

- Mulesing-free Merino Wool
- Single Jersey construction
- Round collar
- Flatlock seams
- Side seams are moved forward
- Elastic two-needle seams at the hem and cuffs
- Material weight 160 g/m<sup>2</sup>
- Micron count 19.5

# HARDWARE

Lundhags

# A HISTORY OF TREKKING

The definition of trekking depends on who you ask. For us here in Scandinavia, it's an activity including various terrain. Summer, autumn, winter and spring. Often, but not necessarily, in demanding weather. The Scandinavian way of hiking does not necessarily mean that you move about on well-tramped hiking paths or ski along tracked trails. You might just as well find yourself on untracked terrain, with a map and compass in your hands. On a route that you have planned yourself.

We believe that Scandinavian trekking demands uncompromising equipment. That we make a choice in every detail of our products. And in these choices, we always believe in prioritising durability and function ahead of low weight. With our new backpack

series for 2018, we somehow do the opposite of the industry and the popular trends of lightweight trekking. For us, weight is just one parameter of many.

With our roots in the demanding mountain environment of Jämtland, Sweden, we want to offer products that can deal with all imaginable conditions. Even in the mountains. Even when a backpack buckle is handled with a pair of thick winter gloves on, or when the steel edges of a ski slides against the fabric of a backpack. With exclusive material choices, rugged fabrics, and true metal buckles, we have filled our new backpacks with our history. And our philosophy of creating world-class outdoor products. Products that you can trust, for a very long time.

## USER-FRIENDLY BACKPACKS – TESTED & APPROVED

The design and construction of Lundhags new series of backpacks is based on our collective experience and know-how from years of year-around outdoor activities. If our products work in the most challenging, cold and windy conditions, such as where glove-friendly operation is a must, they will also work during the summer. Therefore, we always strive to find small, sometimes unique, solutions that make it easier to also operate your backpack during harder winter conditions.

## MATERIALS – SUSTAINABLE & FUNCTIONAL

Our backpack materials are carefully selected to match our sustainability criteria. This means not only being bluesign approved, but also using organic content or being fluorocarbon-free. Just as important are the long-lasting properties that will last over several years of use. Hence, our materials have completed stringent performance tests in real life and in the laboratory to qualify. After all, a long-lasting backpack is the best investment you can do.

## OUR CHOICE OF TRIMS – SAFETY FIRST

Even the easiest going trek can turn into a more challenging adventure. Our mission is to ensure that your experience, together with your choice of equipment, will result in you enjoying the outdoors even during more difficult outings. The materials, trims and seams should withstand years of use and not leave you stranded with, for example, a broken zipper or buckle. Therefore, we only work with high quality suppliers and we prefer oversized detailing instead of thinking minimalistic. Because it simply works better. Oversized zippers, well-dimensioned pull-tabs, large zipper pullers and

sufficiently sized buckles are important factors when the weather turns bad, you are lost and perhaps out of energy.

## ZIPPERS

We use RC (Racquet coil) zippers from YKK. Specially designed for luggage applications where resistance to abrasion is a must. This zipper has been precision engineered to meet the toughest performance requirements and because the zipper is usually the weakest link in a backpack, our choice here is critical. We usually use the toughest size #10 on all main entrances for extra-long lasting functionality.

## BUCKLES

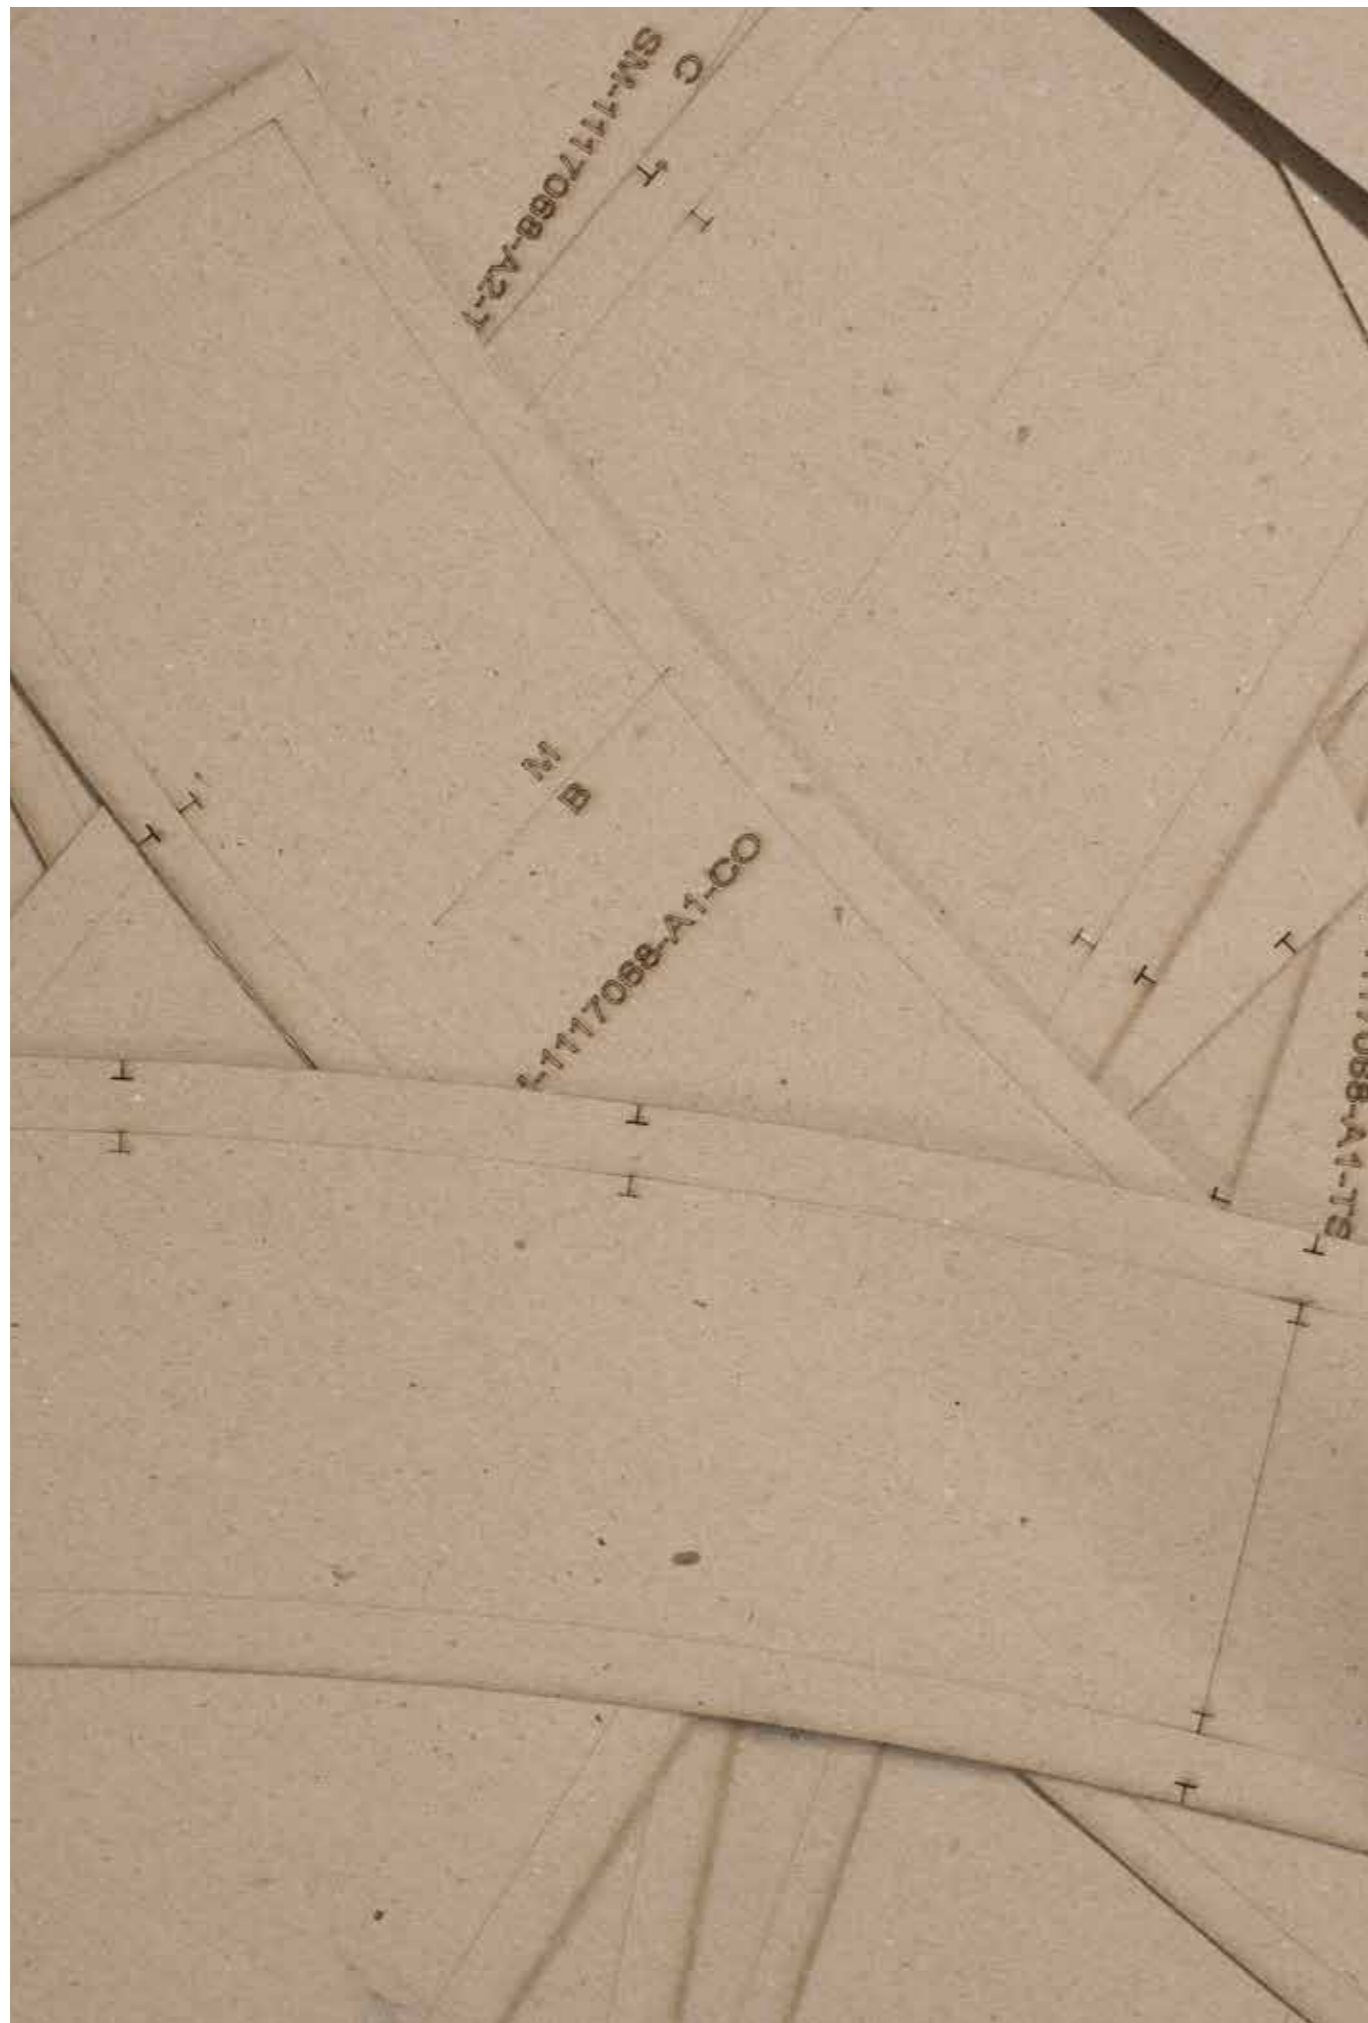

Generally, we use hardwearing metal components whenever possible. Made from aircraft grade aluminium, they are durable and extremely strong aluminium stamping, meaning that they won't fail during a long trek where help is far away.

## WEBBINGS

We only use premium quality 420 x 420D polyamide webbings supported by internally weaved core lines for extra tensile strength, which makes the webbing extra strong compared to weight ratio.

## SEWING THREAD

Our 210D polyamide bonded sewing thread is for any item that needs the highest seam strength. It is specially developed for high quality backpacks that require a high tenacity and where broken seams must be avoided. Superior abrasion resistance.

**LUNDHAGS TREKKING PACKS**

Long and adventurous treks are really at the core of the Lundhags soul and our packs will support you with the necessary comfort and features you need to stay focused along the trails. From the supportive framework to the smallest details, our goal is that you should be able to carry and use your backpack through the toughest conditions, while focusing on your experience.

### GNAUR 90/75/60

Our most advanced backpack with stability and comfort for long treks or during traveling. With stability, durability and easy operated features, you will become close friends for many years to come. All parts of the carrying system can be repaired or replaced.

Gnaur has the weight to support big loads and carry comfortably. Made from our durable Lundhags PolyCotton fabric, Gnaur reflects our belief in slightly heavier backpacks. All parts from the suspension system can be repaired or replaced. And not only does Gnaur use rugged aluminium buckles and fasteners, it also accepts smaller bags from Lundhags for additional capacity. If you are searching for a backpack that you can have for years to come, the Gnaur series is your friend for life.

- Rigid and torsion stable rod & aluminum stay framework
- Adjustable carrying system in size RL (Regular-Long: 56-42 cm)

### BACK LENGTH MEASURING

To fit your Gnaur carry system correctly, it's quicker if you already know the length of your back. Measure your back length, using a measuring tape, from your seventh vertebra down to the point of your spine where you are levelled with the top of your hip bone. Ask the staff at your local outdoor shop for help.

### GNEIK 54/42/34

A highly technical backpack for shorter trips where you do not need to carry everything. A vented back panel allowing air to pass between the pack and your back. Every little detail has been considered to make this pack fully functional, no matter the season or weather.

### GNEIK MAIN FEATURES

- Rigid and torsion stable aluminum rod framework
- Ventilated back through Air System
- Top puller adjustment
- Ergonomic shoulder straps for maximum comfort
- D-rings on shoulder straps as attachment points
- Movable chest strap
- Duo density cushioned hipbelt for increased load comfort capacity
- Easily accessible water protected hipbelt pockets with zip closure
- Compatible with pulka and dog expander leash
- Floating top lid with two zippered compartments and elastic side panels
- Front-/side opening from top or bottom
- Robust front handle
- Hole webbings for numerous durable attachment points
- Expandable top mounted front pocket
- Tuck away upper and bottom trekking pole & ice axe attachment loops
- Elastic wand pockets
- Dual side compressions
- Compression strap under lid for tent fastening
- Extendable collar for additional capacity with double-pull drawcords
- Hydration system compatible
- Indestructible buckles made of aircraft aluminum
- Glove-friendly zipper pullers
- Prepared to attach Jomlen 25, Gnaur +10 or Knul 7 items for additional capacity

# SIZES FOOTWEAR

## BECOMING ONE WITH OUR LASTS

A last is the form used in the manufacturing of footwear, and considered crucial to the fit. For our collection of boots, we work with several different lasts. Each one is slightly different, and it is therefore important to know the differences when choosing a boot. Naturally, it is an individual preference when it comes to how tight you want your boots to be. Furthermore, most of us have a different size on the right and left foot. The key is choosing the size that fits the largest foot best because an overly narrow boot often slows blood circulation and increases the risk of cold feet and blisters.

## OPTI WS LAST

This last has the same shape as the Opti last, but over the years has been modified to fit women and smaller sized feet better. It is slightly narrower and higher over the ankle. Models with Opti Ws last include: Mira Ws, Vandra Ws and the unisex style Park up to size 40.

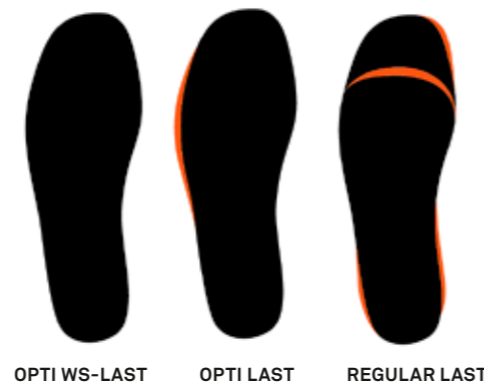

## OPTI LAST

This last is somewhat wider and has a lower ankle height to prevent the foot from sliding forward. The toe box has been developed from earlier versions to provide more room for your toes. Models with

Opti last include: Jaure, Syncro, Professional Opti, Vandra and the unisex style Park from size 41.

## REGULAR LAST

This last is an extension of our previous Normal last where the volume has been increased and the big toe joint has become straighter in order to provide extra space. It is suitable for feet with a high instep, which many of us have. Models with Regular-last include: Contessa Ws, Professional and Forest.

## SHELL BOOTS

Use the size chart on the left to measure your foot from heel to toe and then add 20 mm from your measurement. For the best comfort and foot climate, use a thin merino wool liner sock next to your skin. Then put another (slightly thicker) sock on to handle abrasion and moist.

## OMNI

Use the size chart in the middle to measure your foot from heel to toe and then add 15 mm from your measurement. For the best comfort and foot climate, use merino wool socks.

## HERITAGE

Use the size chart to the right to measure your foot from heel to toe and then add 15 mm from your measurement. For the best comfort and foot climate, use merino wool socks.

## BOOTS

### CERTECH® EXP

Certech® Exp is Lundhags own shell construction for the lower parts of the boots. A technology built-up in three layers. The outer layer is the durable, but light material Liba Smart, the midlayer uses Eva for insulation and shock absorption, and the inner layer is micro fibre, which lines the entire inner for best comfort. Together, the layers in Certech® Exp create a light and durable protection against everything that a pair of boots can be exposed to.

### CERTECH®

Cellular Rubber Technology is the manufacturing technology behind Lundhags cellular rubber bottom. Cellular rubber is a yeast rubber with numerous micro air bubbles that provide a light and flexible waterproof material. To describe the differences in rubber, each version is numbered 2.0-5.0, with the highest number representing a more stable and insulating design. The same construction is available in both Regular and Opti lasts. The Ws versions have slightly softer soles and thinner insulation for a more customized flex.

### ARIAPRENE

Ariaprene is a high performance synthetic rubber material. It is light, elastic, and closed-celled, meaning that our products gather less water and dry quicker. Ariaprene is also used for its insulating and shock absorbing properties, and it is free from harmful chemicals.

### LIBA SMART

Liba Smart is made of Expanded TPU (thermoplastic polyuretan). A material which out performs rubber in most tests. A light, hard wearing protection that is waterproof, flexible and 100% recyclable. Liba Smart is UV- and ozone-resistant.

### INSOLE

The insole is built from a 3 mm fiber material and has a built-in steel shank. Our strongest models use Texon T70, a fiber material with a polymer core for stability and torsional rigidity.

### EVA ISOLATION

An extra layer of EVA with a hardness of 35 ShA is used to improve cushioning and resistance to the cold. The thickness together with the insole effects the flex of the boot. Thickness of 4 or 6 mm.

### CLARINO® MICROFIBER

Polyurethane/Polyamide microfibers provide a light, flexible material with great durability. It is used as a lining material in both Certech® constructions and 3-layer shafts in the most exposed places. Thickness 1.0 mm or 1.4 mm.

### VIBRAM® TRACTION SOLE

Our outer soles are made of Vibram®, built with EVA to provide cushioning and a rolling step. The traction pattern is exclusive for Lundhags' boots. Available in Megagrip compound for grip and durability.

### LUNDHAGS COMMANDO SOLE

Our new development, a classical rough patterned sole with a medium soft rubber compound that provides grip and durability.

### VIBRAM® CURCUMA

Self cleaning track pattern outsole with Tront rubber compound and toe protection. 25% lighter thanks to faceted mould.

### FULL GRAIN LEATHER

Full grain leather uses the best parts of the hide. Nubuck is a full grain leather that has been gently brushed to give the surface a different character. The Nubuck surface breathes better and is easier to re-impregnate. The leather is impregnated directly at the tannery and no fluorocarbons are used in the process, which takes place in a closed system. Thicknesses of 2.0-2.2 mm.

### TPU TOECAP

The developed TPU toecap forms a strong attachment of the sole to the shoe by distributing forces over a larger area. The TPU toecap also protects against wear and extends the life of the shoe.

### PERWANGER® SPLIT LEATHER

A finer split leather from cow that is robust, has excellent breathability, is water repellent and hardwearing. Thicknesses of 1.8-2.0 mm.

### NEOPRENE

Neoprene is used in our 3-layer shafts for stability without absorbing moisture. The material spreads impacts and protects the foot from sharp objects. Used in different layers depending on the desired effect. Thickness of 4 mm.

### HEEL FIT CONTROL

An extra cushion that covers the seam between the bottom and shaft to provide an improved heel grip and stability.

### RINGS AND HOOKS

Our rings/hooks and rivets are manufactured from iron or copper/iron alloys for maximum resistance. We use a nickel-free, high resistance treatment to provide additional protection against corrosion.

### CAMBRELLE®

100% Polyamide produces a lining material with a high level of wear resistance and moisture absorption. Weight: 150 g/m<sup>2</sup>.

### FELT

The felt in the foot beds and inner boot consists of 70% Wool and 30% Polyester. Thickness of 3 or 5 mm.

## CLOTHING

### LPC= LUNDHAGS POLYCOTTON

RM = RECYCLED MATERIAL

OC = ORGANIC COTTON

LN = LUNDHAGS NYLON POLYESTER

LNP = LUNDHAGS NYLON POLYESTER

### LPC RM/OC

Lundhas Lundhags Polyester Cotton mix with Recycled Material and Organic Cotton. Water resistant when combined with TOKO DWR treatment. The fabric works well in light rain and is fast drying if wet due to heavy rain. Tightly woven twisted yarn in warp and weft is wind resistant and makes the material durable. The fabric construction provides good UV protection when used in strong sunlight.

### LPC 155 RM/OC

Lundhags Polyester Cotton mix, Recycled Material, Organic Cotton. Composition: 65% recycled polyester, 35% organic cotton. Weight: 155gr/m<sup>2</sup>.

Comfortable light weight softshell stretch, for freedom of movement. A durable and hard-wearing material with high tear strength. Wind and water repellent surface. A permanent elastic and durable material. LN-strech 176 = Lundhags Nylon Stretch. Composition: 92% Polyamide, 8% Polyurethane. Weight: 176g/m<sup>2</sup>

### LNP-STRETCH 200

Softshell stretch material for special parts of the garment to increase freedom of movement and comfort. A durable and hard-wearing material with high tear strength. Wind and water repellent surface. A permanent elastic and durable material. LNP-stretch 200 = Lundhags Nylon Polyester stretch. Composition: 60% Polyamide, 30% Polyester, 10% Elastane. Weight: 200g/m<sup>2</sup>

### ZETHAR®

Zethar® is A fully water and windproof 4-way stretch material with good strength and abrasion resistance. All materials labeled Zethar are fluorocarbon-free, have a minimum water column of 20 000 mm, and a minimum breathability of 16 000 g/m<sup>2</sup>.

### ZETHAR® 3L 168

100% Polyamide with Zethar membrane and Polyester circular knit backing. 20 000 mm water column, 16 000 g/m<sup>2</sup>/24H. Weight: 168 g/m<sup>2</sup>.

### ZETHAR® 3L STRETCH 129

100% Recycled Polyester Mechanical Stretch with Zethar membrane and Polyamide backing tricot backing. 20 000 mm water column, 20 000 g/m<sup>2</sup>/24H. Weight: 129 g/m<sup>2</sup>.

### ZETHAR® 3L STRETCH 200

100% Polyamide Mechanical Stretch Oxford with Zethar membrane and Polyamide tricot backing. 20 000 mm water column, 16 000 g/m<sup>2</sup>/24H. Weight: 200 g/m<sup>2</sup>.

### SCHOELLER® DYNAMIC

A high quality, permanent elastic fabric that provides users with an increased freedom of movement. A durable and hard-wearing material with high tear strength. The material has been impregnated with a fluorocarbon-free, water repellent treatment. Composition: 92% Polyamide (Micro), 8% Elastane. Weight: 270 g/m<sup>2</sup>.

### SCHOELLER® DRYSKIN

Double fabric construction with synthetic fibers on the outside and functional fibers on the inside for rapid moisture transport. A durable and hard-wearing material with high tear strength. Wind and water repellent surface. A permanent elastic and durable material. Composition: 52% Polyamide, 41% Polyamide (Micro), 7% Elastane. Weight: 255 g/m<sup>2</sup>.

### SCHOELLER® KEPROTEC® ECO

A fabric with an extremely high durability and tear strength. Used as reinforcement fabric on some of the garments in the collection. An extremely abrasion and tear resistant fabric with Kevlar® for top quality protection. Composition: 76% Polyamide and 14% AR (Kevlar®) 10% PU. Weight: 177 g/m<sup>2</sup>.

### CORDURA®

A durable reinforcement made from 500d Cordura®. Used as reinforcements for many of our pants.

### LIGHT

100% Recycled Polyester, 20Dx30 Ripstop. Weight: 43 g/m<sup>2</sup>.

### THERMAL QUILT

45% Wool, 43% Polypropylen, 12% Polyester. Wool blend, originally developed for Himalaya expeditions with the main goal to be warm and lightweight. To reach same thermal properties with 100% wool you need almost the double weight. Weight: 330 g/m<sup>2</sup>.

### MERINO WOOL 100%

Soft, thin, naturally breathable and high quality Wool. Mulesing free. Provides a warming and cooling effect even when wet. Merino wool has an excellent warmth-to-weight ratio and naturally controls odors without any added chemicals.

### PRIMALOFT®ECO

Ultrafine microfiber insulation made from 70% or 60% Recycled Polyester.

### TENCEL®

Tencel® is a fiber made of cellulose from fast growing coppice. It provides the material with a soft and comfortable surface that cools and effectively transports moisture away from body.

### ECO COTTON

Garments made from Eco Cotton are made from Certified Organic Cotton and fluorocarbon free surface treatments.

### FLOUROCARBON FREE

Flourocarbons are harmful to our environment and living organisms. Lundhags strive to develop products friendly to our environment and aim for all our garments to be 100% flourocarbon-free.

### POLYESTER RIPSTOP RM

A windproof, water repellent lightweight yet strong and durable fabric. Composition: 100% Recycled polyester. Weight: 53g/m<sup>2</sup>.

## BACKPACKS

### LPC 455

Lundhags Polyester Cotton mix. The fabric works well in light rain and is fast drying if wet. Tightly woven twisted yarn in warp and weft makes the material very durable. Composition: 65% Polyester, 35% Cotton. PU-coating >7 000 mm. Product, including DWR 100% FC-Free. Weight: 455 g/m<sup>2</sup>.

### LPC RIPSTOP 231 RM/OC

Lundhags Polyester Cotton mix with Recycled Material and Organic Cotton. Water resistant when combined with TOKO DWR treatment. The fabric works well in light rain and is fast drying if wet due to heavy rain. Tightly woven twisted yarn in warp and weft is wind resistant and makes the material durable. The fabric construction provides good UV protection when used in strong sunlight. Composition: 65% Polyester, 35% Organic Cotton (FC Free DWR). PU-coating >1 500 m. Weight: 231 g/m<sup>2</sup>.

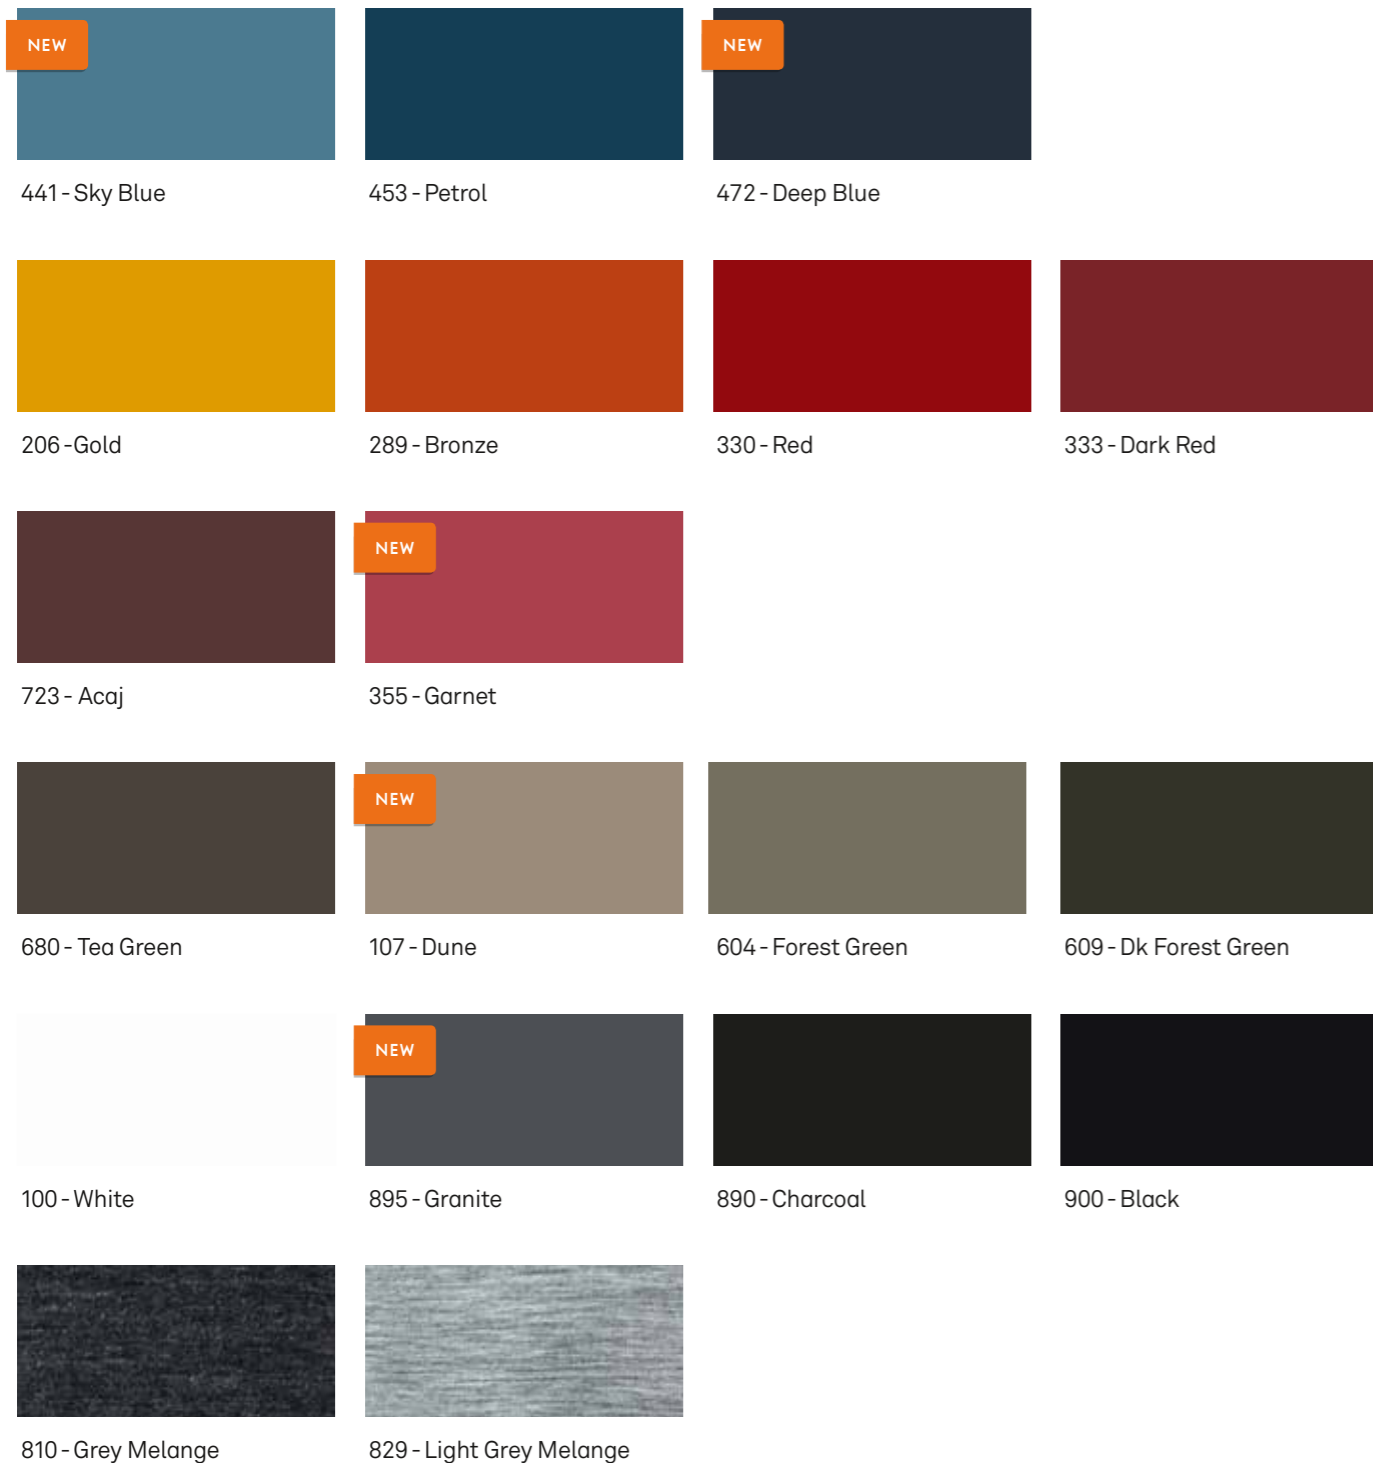

### LP 300

Lundhags Polyester is a material that is highly resistant to destructive UV rays. Our 300d Polyester fabric is coated with PU for added waterproofing. It is hardwearing and copes well with tough conditions. Composition: 100% Polyester, bluesign approved (FC Free DWR). PU-coating >1 500 mm. Weight: 300 g/m<sup>2</sup>.

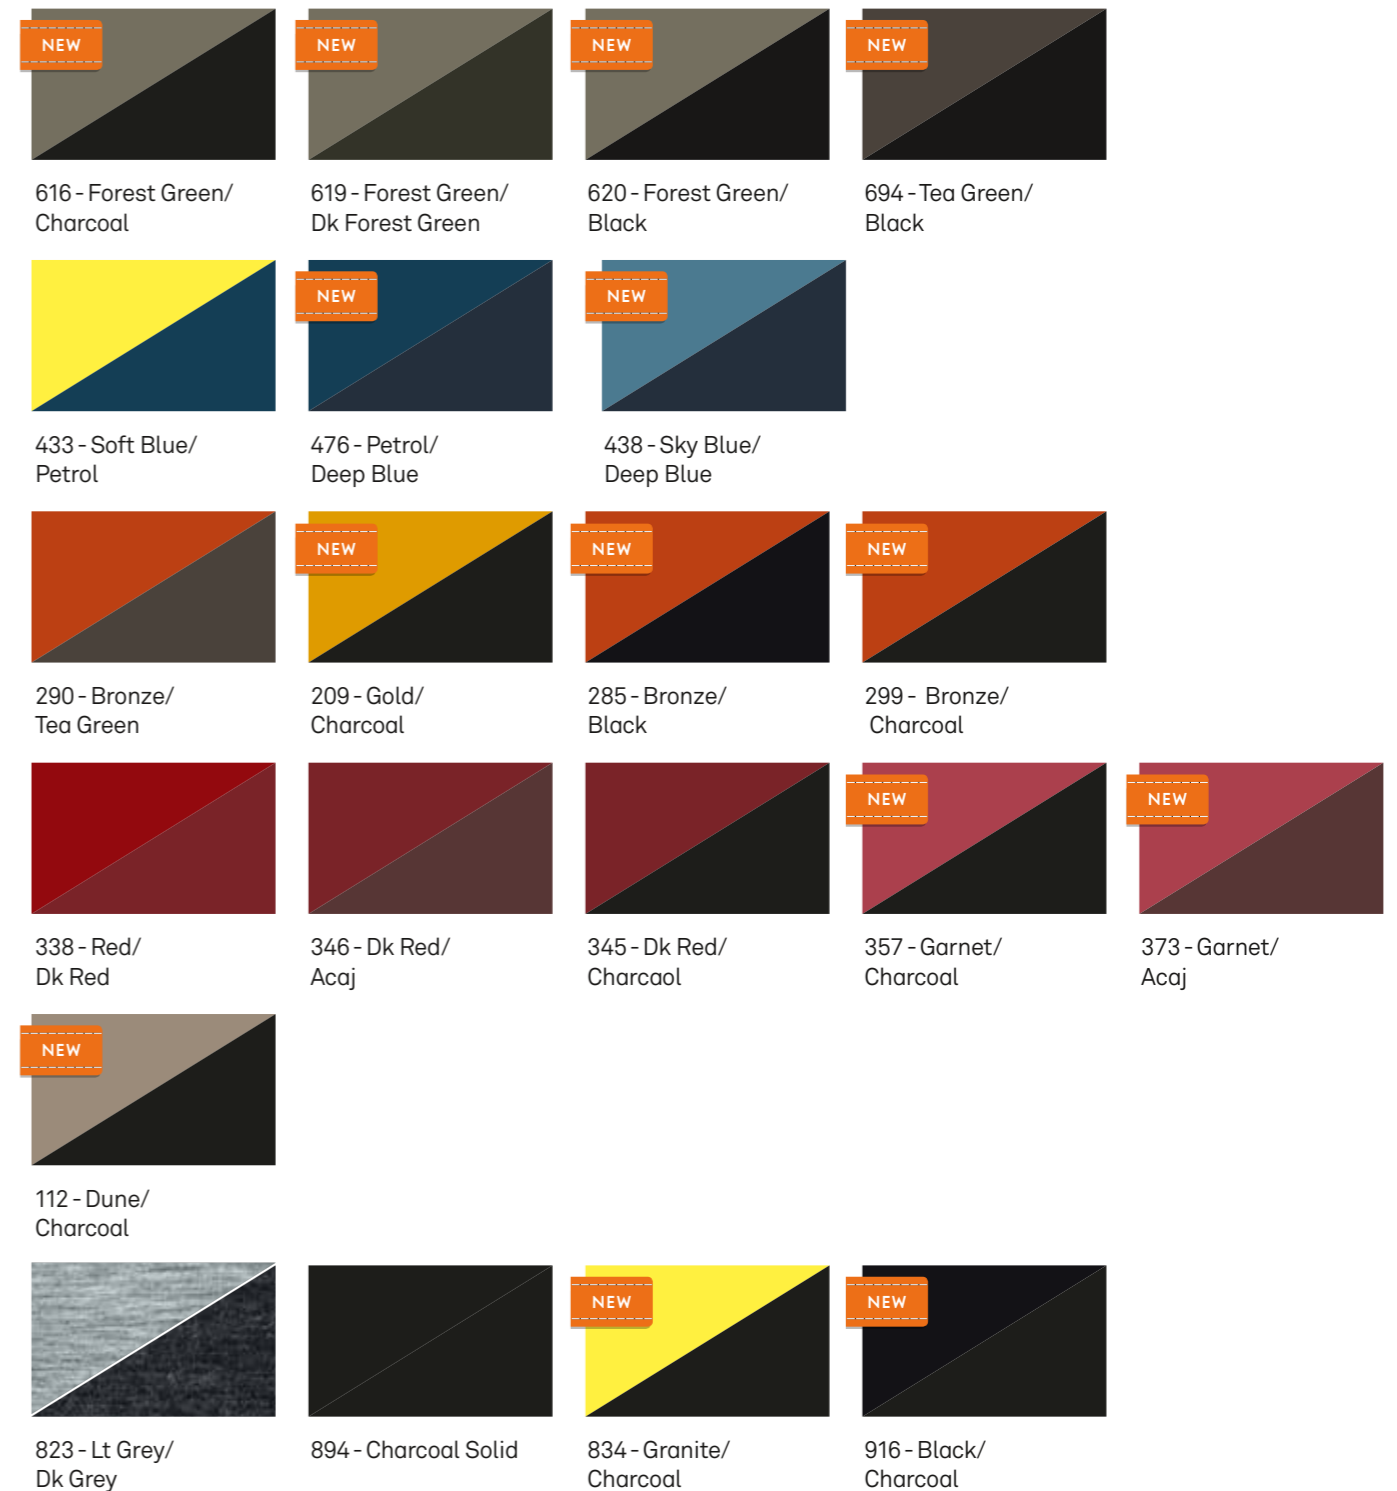

### LP 120

Lundhags Polyester is a material that is highly resistant to destructive UV rays. Our 120d Polyester fabric is coated with PU for added waterproofing. It is hardwearing and copes well with tough conditions. Composition: 100% Polyester, bluesign approved. PU-coating >1000 mm. Weight: 120 g/m<sup>2</sup>.
